

## Quality & Environmental Policy

Sanderson Weatherall manages its business through the operation of a documented Quality and Environmental Management System (QEMS), throughout our operations as Chartered Surveyors at our 5 UK offices. Through the operation of this system, we can be assured that we are offering our clients a customer focused service, which takes into account environmental issues.

Sanderson Weatherall are committed to providing a quality service and recognise the need both to operate and to continually improve our systems, as directed by the mission statement set out by the partners.

Sanderson Weatherall cares about the environment and recognises its responsibilities to minimise, as far as possible, the environmental impact of its activities, products and services.

Through the operation of the QEMS Sanderson Weatherall will prevent pollution by adopting more environmentally friendly practices, using more efficient equipment and re-using and recycling materials. Where possible, Sanderson Weatherall will make our clients aware of alternative energy efficient and sustainable options for their building projects.

Sanderson Weatherall regularly evaluate our practices and set/review targets to ensure that standards are maintained across the Firm and that Sanderson Weatherall will continually improve.

Sanderson Weatherall will ensure that our operations meet and if possible exceed any legal and other requirements relating to our environmental aspects and quality of our work.

Our employees and others working for or on our behalf, will be made aware of this policy, which is freely available to the public upon request via our website.
